

# VSP™ System

Virtual Surgical Planning & Tactile Clinical Transfer

Medical Modeling's VSP™ System is a broad-spectrum service enabling virtual surgical planning of common cranio-maxillofacial reconstructive surgeries. Common uses of this system include planning for fibula free-flap reconstructions of the mandible and planning for repositioning of zygomatic or orbital fragments in secondary reconstruction.

- Simulate cranio-maxillofacial procedures on your patient's CT/CBCT.
- Optimization of user defined osteotomies and bony movements prior to surgery.
- Transfer the virtual plan to surgery using custom guides, templates and models.
